

Our innovative approach to physical substation walkdown inspections **reduces compliance validation time by up to 70%.**

**Use TrackLogic to track project progress effectively and efficiently.** Key indicators measure your overall performance and proactively identify potential bottlenecks or problems. Our objective is to automate your entire process flow from beginning to end.

Technicians view and enter compliance data directly into TrackLogic on tablets, *even without internet access!* No more unwieldy papers or complex spreadsheets in the field.

PM and QC personnel review the data, comments, and recommendations for assets online.

PM and Client can download project reports and site data in PDF or CSV format for further BI analysis.

Project updates automatically trigger real-time system notifications online and via email.

Clients review and approve sites online.

## Integrated **Safety**, **Reliability**, And **Risk-Prevention** For Your Data and Processes

### Security Excellence

Runs on a secured AWS cloud-based platform with accessibility to a selective shared or personalized server.

Provides data, password, and documentation encryption.

Restricts access to servers through a 128-bit encrypted security key and whitelisted IPs.

Controls user accessibility based on authorized role assignments. Tracks and timestamps user transactions in the system.

### Project Workflow

- ✓ Scheduling
- ✓ Site Administration
- ✓ Technician Data Entry
- ✓ Quality Control
- ✓ Deliverable Creation
- ✓ Client Approval
- ✓ Client Invoicing
